

LEROY KIRUI

SKILLS

Frameworks & Tools

Django · Git · Linux CLI · Bubble.io

Programming Languages

Python · Bash (Shell Scripting) ·

JavaScript

Technical Competencies

REST APIs · Automation · Debugging ·

Version Control ·

Workflow Optimization

TRAINING / COURSES

Python, Django, Backend Development

ALX Software Engineering Program

Independent Software Developer | Automation & Backend Development | Python Expertise

@delleroy04@gmail.com  github.com/KiproY04

SUMMARY

Self-taught software developer with proven expertise in automation, backend development, and developer tooling. Demonstrated ability to build practical solutions using Python and shell scripting to streamline workflows and improve productivity. Strong problem-solving skills with experience developing real-world applications addressing agricultural and business challenges. Committed to continuous learning and professional growth in software engineering.

EXPERIENCE

Command-Line Developer Toolkit 2026

Dev Toolkit

- Enhanced development efficiency, resulting in a 90% productivity boost by engineering a command-line toolkit.
- Built reusable CLI tools (pushgit, mkvenv) using Bash with robust argument parsing and error handling.
- Designed automated installation script for easy deployment across development environments.
- Achieved measurable improvement in development efficiency through workflow automation.

Developer 07/2025 - Present

Zinocare

- Developed backend system helping farmers track livestock and poultry vaccination schedules using Python and Django
- Designed data models and system architecture to solve real-world agricultural challenges
- Integrated planning features for veterinary assistance and automated scheduling

Vacation Planning Application 05/2023 - 01/2024

VacAI

- Investigated and resolved user experience issues affecting product performance and customer satisfaction
- Analyzed sales decline and user complaints to identify critical usability issues
- Contributed to product relaunch strategy focused on improving customer experience

Independent Software Developer 01/2023 - Present

Self

- Designed, built, and deployed personal projects demonstrating full-stack development capabilities
- Implemented version control best practices and automated workflow systems
- Maintained active GitHub portfolio with 23+ repositories showcasing diverse technical skills
- Continuously expanded technical knowledge through self-directed learning and practical application

EDUCATION

Self-Taught Software Developer 01/2023

Continuous Learning Program

- Comprehensive study of database design, APIs, and system architecture
- Active participation in coding challenges and practical projects

EDUCATION

High School Graduate

01/2018 - 03/2022

[Kirobon Boys High School](#)

Nakuru, Kenya

PROJECTS

Dev Toolkit CLI | Command-Line Developer Toolkit

01/2023

- Engineered a comprehensive command-line toolkit automating developer workflows including Git operations and Python environment setup
- Built reusable CLI tools (pushgit, mkvenv) using Bash with robust argument parsing and error handling
- Designed automated installation script for easy deployment across development environments
- Achieved measurable improvement in development efficiency through workflow automation

Zinocare | Agri-Tech Livestock Management System

01/2022

- Developed backend system helping farmers track livestock and poultry vaccination schedules using Python and Django
- Designed data models and system architecture to solve real-world agricultural challenges
- Integrated planning features for veterinary assistance and automated scheduling
